## Fastpath Config AD

Enterprise class security management for Microsoft Dynamics integrated with Active Directory

Fastpath Config AD consolidates the security configuration and maintenance functions for many Microsoft Dynamics applications like Microsoft Dynamics AX, Microsoft Dynamics GP and Microsoft Dynamics CRM in Active Directory. With single sign-on and enterprise class security for Microsoft Dynamics, Fastpath Config AD moves all user management to the IT help desk and eliminates potential security conflicts by taking all user administration out of Microsoft Dynamics. As a result, companies can delegate user security configuration to Tier 1 support resources responsible for network maintenance.

Config AD enables administrators to manage all aspects of Microsoft Dynamics security from Active Directory. Administrators no longer need access to Microsoft Dynamics or to an administrator password to create, change or delete users. With a simple click, a Microsoft Dynamics user can easily be created in seconds.

### Features:

- Single sign-on to manage only one password
- Eliminates need for second login to Microsoft Dynamics
- User delete/disable in Active Directory flow to Microsoft Dynamics
- Eliminates use of an Administrator for better security management

### System Compatibility:

#### ERP

- Microsoft Dynamics AX – versions 3, 4, 2009
- Microsoft Dynamics GP - versions 6, 7, 8, 9, 10, 2010

#### Database

- Microsoft SQL 2000, 2005, 2008
- Microsoft Office
- Microsoft Office 2000, XP, 2003, 2007, 2010

#### Operating System

- Windows XP, Vista, Windows 7, Server 2000, 2005, 2008

### Product Benefits:

#### Active Directory Integration

With the Active Directory add-on, administrators can create and maintain users of Microsoft Dynamics without ever opening the Microsoft Dynamics application.

#### Single Sign-On

Using the single sign-on functionality, employees can use their Microsoft Dynamics User ID/Password. You get the luxury of managing only one password policy right from Active Directory.

#### Single Point of Maintenance

Within Active Directory a security administrator can create network users, e-mail users in Exchange as well as ERP users in the Microsoft Dynamics products.

#### True Role-Based Security

Solution provides users only the authorizations that are needed to do their job for better security management.

#### Strong ROI

Fastpath Config AD saves time managing security immediately. The solution offers a standard set of roles that will apply to most businesses with the ability to create new roles easily.

***"With Fastpath Config AD, we now have a more secure environment and spend less time and resources in managing Microsoft Dynamics GP security. From an auditing perspective, we also like the fact that the administrators do not need the System Administrator password which closes a large security hole."***
